**IN THE ABSTRACT**

Abstract, line 8: After "transfer", insert --unit--.

**IN THE CLAIMS**

Kindly cancel Claims 1-32.

Kindly add Claims 33-41 as follows:

33. A camera comprising:

a camera body;

a first memory capable of storing image information corresponding to at least two photographic frames;

a second memory;

a first reproduction device to receive and reproduce image information recorded on one of the first memory and the second memory; and

a changer for selectively changing between a first condition, in which image information on the first memory is outputted to the first reproduction device, and a second condition, in which image information on the second memory is outputted to the first reproduction device.

34. A camera according to Claim 33, wherein the first memory is detachably mountable to the camera body, and wherein the second memory is fixedly provided in the camera body.

35. A camera according to Claim 33, wherein the first memory is an IC card.

36. A camera according to Claim 33, which further comprises a finder for finding a camera subject.

37. A camera according to Claim 33, which further comprises a printer for printing on a recording medium corresponding to the image information recorded on one of the first memory and the second memory.

38. A camera comprising:

a camera body;

a first semiconductor memory capable of storing image information corresponding to at least two photographic frames;

a second semiconductor memory;

a reproduction device to reproduce image information stored on one of the first semiconductor memory and the second semiconductor memory; and

a changer to selectively change between a first condition, in which image information on the first semiconductor memory is outputted to the reproduction device for reproduction, and a second condition, in which image information on the second semiconductor memory is outputted to the reproduction device for reproduction.

39. A camera according to Claim 38, which further comprises a finder for finding a camera subject.

40. A camera capable of supporting a first memory and a second memory, the camera comprising:

a camera body;

a first connection connectable to a first memory capable of storing image information corresponding to at least two photographic frames;

a second connection connectable to a second memory;

a first reproduction device to receive and reproduce image information recorded on one of the first memory and the second memory; and

a changer for selectively changing between a first condition, in which the first reproduction device and the first connection are placed in communication, and a second condition, in which the first reproduction device and the second connection are placed in communication.

41. A camera capable of supporting a first memory and a second memory, the camera comprising:

a camera body;

a first connection connectable to a first semiconductor memory capable of storing image information corresponding to at least two photographic frames;

a second connection connectable to a second semiconductor memory;

a reproduction device to reproduce image information stored on one of the first semiconductor memory and the second semiconductor memory; and

a changer to selectively change between a first condition, in which the reproduction device and the first connection are placed in communication, and a second condition, in which the reproduction device and the second connection are placed in communication.

#### REMARKS

This Preliminary Amendment cancels Claims 1-32 of this Application and adds Claims 33-41, wherein Claims 33, 38, 40, and 41 are independent.

Proposed amendments to FIGS. 10, 14A, 16B, 33, 43, and 44 are made in association with this Preliminary Amendment to correct minor errors therein. These proposed amendments are submitted herewith in accordance with 37 C.F.R.

§ 1.121(a)(3)(ii).
